

1. (CURRENTLY AMENDED) A method of producing microparticles comprising a bioactive and a vehicle, which method comprises

providing a solvent having a bioactive dispersed or dissolved therein and a vehicle dissolved therein,

carrying out an emulsification in a non-solvent phase to produce an emulsion comprising the bioactive and the vehicle in a solvent phase, and

evaporating the solvent to leave said microparticles, wherein a mixture of at least two surfactants is employed to stabilize the emulsion and wherein the mixture has a hydrophilic-lipophilic balance (HLB) of ~~up to 8~~ **from 2 to 5**, and wherein the method yields microparticles having a median diameter of up to 100 μm ; **and the vehicle is an acrylic-based polymer, a cellulose-based polymer or a polyvinyl-based polymer.**
